

# SMART SCALABLE STORAGE CONNECTED TO THE CLOUD

Datto NAS  
Business:  
500GB to 3TB

Datto NAS  
Professional:  
6TB to 24TB

Datto NAS  
Enterprise:  
30TB to 60TB

**Datto NAS** is a smart hybrid cloud storage solution with snapshotting. Datto NAS is no ordinary network-attached storage. As users share documents, it takes snapshots of their data so they can easily roll back to previous versions of anything being worked on. All data syncs to the secure Datto Cloud so it is always accessible, even in the event of a disaster.

Datto NAS units come with storage capacity ranging from 500GB to 60TB. A MSP can deploy the Datto NAS unit that fits their client today, then upgrade later to a larger size. All models have hot-swap drive bays so upgrades may be done right in the field.

Datto NAS is perfect for law firms, schools, and small businesses that need flexible storage for documents and media. Incremental snapshots can be taken as often as every five minutes, so you can go back to a previous version of a file or folder instantly.

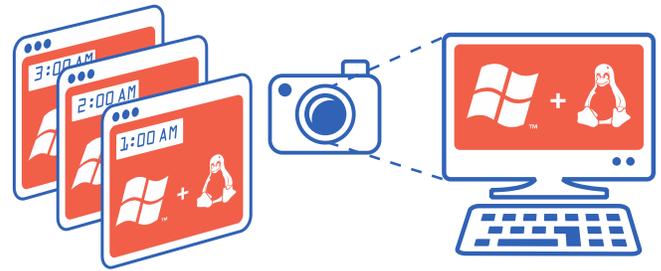

A simple wizard-based interface makes Datto NAS incredibly easy to set up and manage. Datto NAS preserves all Windows permissions so users only have to set security policies once.

Datto NAS Business is available in a 4-bay unit with models in capacities ranging from 500GB to 3TB. A second line, Datto NAS Professional, puts this hybrid cloud solution in 8-bay units ranging from 6TB to 24TB. Finally, the Datto NAS Enterprise line delivers rackmount flexibility with capacity up to 60TB.

All Datto NAS devices come with a solid state operating system drive for superior reliability and RAID for redundancy.

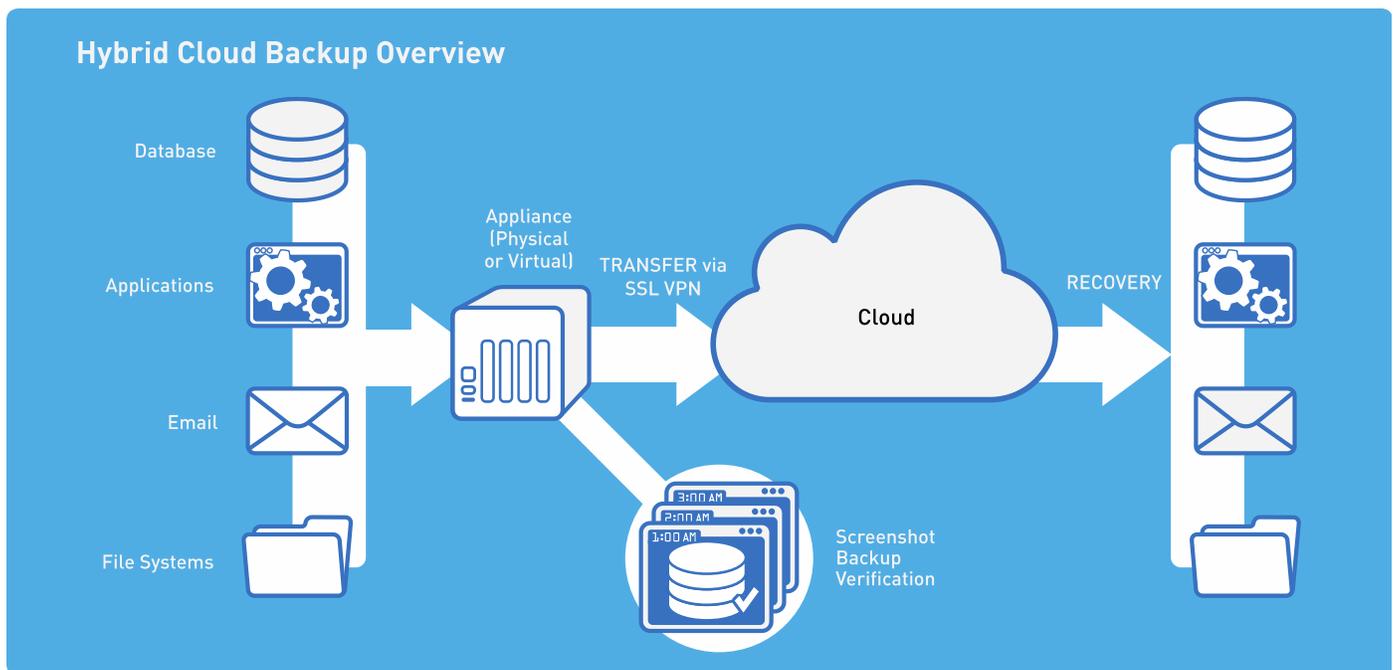

## Snapshotting

Datto NAS lets you set up a custom schedule for capturing snapshots of your data. Recovering a previous version of a document is quick and painless, whether you're at the office or on the road. (See Figure 1)

## Hybrid Cloud

Datto NAS utilizes the same Hybrid Cloud technology Datto has perfected in its business continuity solutions to provide bulletproof protection for your NAS data. Snapshots of the Datto NAS are replicated to the Datto cloud, so if there is a local disaster like a flood and the Datto NAS is destroyed, you have a backup copy in the secure Datto cloud.

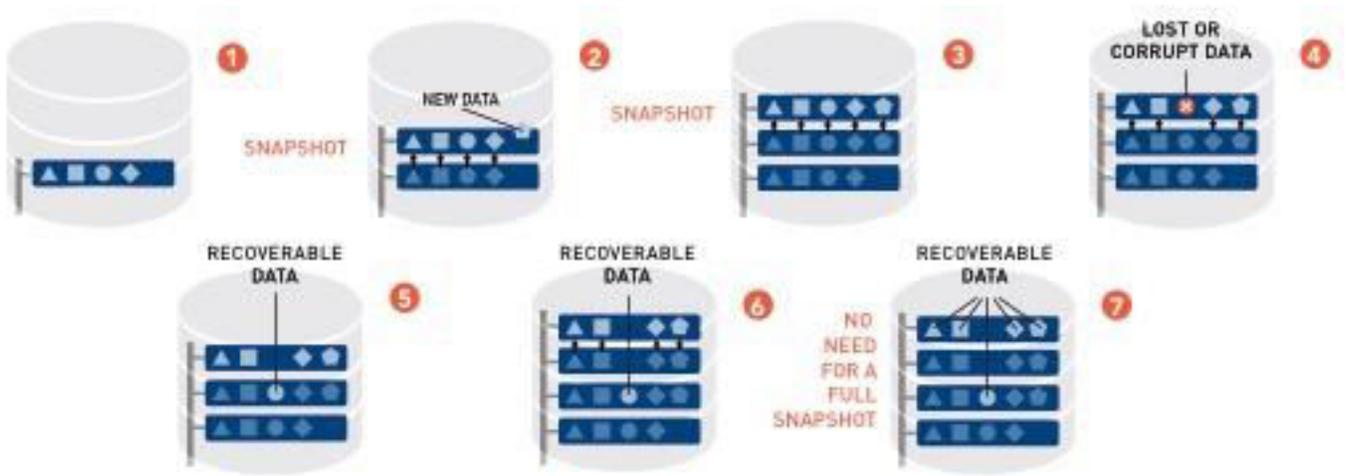

## Hot-Swappable Drive Bays

Datto's unmatched upgrade policy means you can deploy the appliance that fits your client today, then upgrade to a larger capacity unit later on. Hot-swappable drive bays mean most upgrades can be done right in the field.

## Inverse Chain Technology™

Datto's proprietary Inverse Chain Technology eliminates the problem of broken backup chains — the place where most issues arise in the backup process.

### Inverse Chain Technology

## PSA and RMM Integration

Datto NAS was designed from the ground up to integrate seamlessly with the remote monitoring and management (RMM) and professional services automation (PSA) tools that are the lifeblood of a managed services practice. Datto NAS devices are easily connected with ConnectWise, Autotask, Kaseya and AVG Managed Workplace. Keep tabs on your fleet, set up alerts and notifications, and track billing and setup across your client base. All of this means less time spent on technology and more time invested in growing your business.
